The all-round solution: Bartec TECH450.

The Bartec TECH450 is the all-round TPMS solution. The tool works with both wired (OBD) and wireless (WiFi, Bluetooth) functions.

In addition to the basic TPMS functions (sensor activation, sensor programming and OBDII relearn procedure), the TECH450 offers other useful functions such as WiFi and inductive charging. In addition, future technologies such as Bluetooth BLE and heavy-duty coverage are available.

*Interested in our high-end yet affordable **TECH600**? Get more information about the device which offers BLE technology for Tesla, Heavy Duty coverage, WiFi and wireless charging **here:** www.bartecautoid.com.

Professional TPMS device from Bartec.

High-resolution 2.8" colour display

Fully rubberised enclosure with protective rim

Wireless charging cradle

Intuitive, icon-based user interface

WiFi for automatic software updates

One-handed operation for right/left handed use

Available in more than 20 languages

Dimensions: 187mm (length) x 107mm (width) x 47mm (depth)

Weight: 375g

Delivery scope

TPMS tool TECH450

Bluetooth OBDII VCI

Wireless charging cradle

USB-cable + power supply unit

Your benefits at a glance

Completely wireless processes:

The TECH450 can be used completely wirelessly thanks to Qi inductive charging, WiFi and Bluetooth OBD VCI. For the user, this means no more lost or misplaced cables, no damaged connections, but an always charged and updated device, as well as uncomplicated OBD learning procedures.

New TPMS-features:

Extended sensor identification: In addition to all regular sensor information like pressure, ID number and battery status TECH450 users can wirelessly identify whether it is a programmable or OE sensor including the manufacturer of the programmable sensor and whether it has been correctly or incorrectly programmed (available for all major programmable sensors on the market).

Faster vehicle selection: Vehicle brands with a high TPMS market share are now listed on page one of the vehicle selection. Users are not depending on the alphabetical A-Z listing anymore which makes the navigation and selection a lot faster compared to other tools available on the market.

Comprehensive sensor and vehicle database:

The software currently covers around 80 car brands and thus offers tyre dealers and multi-brand workshops a comprehensive database for reading, programming and teaching TPMS sensors. As usual with Bartec, the universal sensor database is not limited, i.e. the user can read and program the universal sensors of all leading TPMS manufacturers.

Future-Ready!

Bluetooth BLE: The tool supports new sensor technologies such as BLE (e.g. Tesla).

Heavy Duty TPMS: Coverage available to support new legal requirements.
